Professional Summary

Backend Software Engineer with 2+ years of experience building and improving production systems in the Netherlands across logistics, enterprise integration, and data-intensive applications. Experienced in Java, Spring Boot, PostgreSQL, REST APIs, distributed systems, testing, and CI/CD. At Picnic, delivered major performance and reliability improvements in transport planning services, including a **~95% runtime reduction** in a core algorithm, production incident response, and concurrency and scheduling fixes across backend services.

Work Experience

Picnic Technologies

Amsterdam, Netherlands

Software Engineer, Transport Systems

Sep 2025 – Present

- Build and improve **Java/Spring** backend services for Picnic's Transport Planning System, supporting large-scale transport scheduling under route, time-window, and resource constraints.
- Delivered a major performance optimization in a core planning algorithm, achieving **~93–95% runtime reduction** while improving solution quality and lowering benchmark cost.
- Improved production reliability through fixes in concurrency, reactive execution, shutdown ordering, and scheduling workflows across multiple backend services and repositories.
- Owned and shipped correctness-critical transport planning logic used across **the Netherlands, Germany, and France**.
- Contributed to incident response and production troubleshooting, including leading investigations, reproducing failures locally, identifying root causes, and helping restore service quickly.
- Collaborated across teams and stakeholders to deliver safe rollouts, operational fixes, and maintainable improvements to mature production systems.

Eindhoven University of Technology — SQL Valley

Eindhoven, Netherlands

Software Engineer (Part-time)

Sep 2025 – Present

- Engineer core application infrastructure for SQL Valley, a browser-based SQL learning platform used in and alongside university teaching.
- Designed and implemented state management and persistence architecture, including versioned migrations and maintainable data models for learning progress.
- Improved codebase maintainability through store refactoring, data-model normalization, and shared infrastructure for long-term content and feature growth.

ASML Netherlands B.V.

Veldhoven, Netherlands

Integration Engineer Intern

Dec 2023 – Jul 2025

- Developed integrations for an internal resource-management platform that unified data from multiple enterprise backend systems.
- Built and consumed **REST APIs** with secure **OAuth2/OIDC** authentication, data validation, and synchronization logic.
- Worked with relational data models, ETL-style processing, Git-based development, and CI/CD tooling in a large enterprise environment.

Selected Projects

CarbonInsight

Eindhoven, Netherlands

Bachelor End Project

Apr 2025 – Jul 2025

- Built a full-stack platform for product carbon footprint calculation and digital product passport generation for manufacturing SMEs.
- Implemented backend functionality with **Django REST Framework** and **PostgreSQL**, including authentication, API design, and recursive emissions logic over supply-chain data.
- Turned complex domain rules into a usable, standards-aware software product for non-technical users.

Safe Exam Browser / QuickSTEP Security Research

Eindhoven, Netherlands

Security Research Course Project

Apr 2023 – Jun 2023

- Conducted responsible security research on exam-lockdown software, identifying multiple vulnerability classes through reverse engineering and controlled exploitation.
- Credited in the **Safe Exam Browser v3.6.0** Windows release notes for responsible disclosure.

Education

Eindhoven University of Technology (TU/e)

Eindhoven, Netherlands

BSc in Computer Science and Engineering

Sep 2021 – Aug 2025

- Relevant coursework: Algorithms & Data Structures, Operating Systems, Networks, Security, Databases, Data Mining & Machine Learning.

Technical Skills

Languages	Java, Python, TypeScript, JavaScript, SQL
Backend	Spring Boot, REST APIs, distributed systems, concurrency, authentication/authorization, testing
Databases	PostgreSQL, relational data modeling, query optimization, schema design, migrations
Infrastructure	Git, CI/CD, Docker, containerized applications, reactive systems, monitoring/debugging
Frontend	React, TypeScript

Achievements: Winner, Amsterdam Policy Hackathon (2025) | Credited in Safe Exam Browser v3.6.0 release notes for responsible disclosure

Languages: Bulgarian (Native), English (Fluent)
